

SummarAI

User Manual

How to use SummarAI

NLP Group Project · 2025–2026

Overview

SummarAI converts a recorded meeting into a structured written record. Upload an audio, video, or transcript file and the application returns three outputs:

- **Summary** — a concise paragraph capturing what the meeting was about.
- **Key takeaways** — the main decisions and important points, each tagged by type.
- **Action items** — concrete tasks, with owner and deadline where stated.

The output language is your choice, not the language of the meeting. You can attend an English meeting and receive everything in Spanish, or vice versa.

Getting Started

Option A — Hosted Version (Recommended)

Open the app URL in any modern browser (Chrome, Firefox, Safari, Edge). No installation or account required.

Option B — Run Locally

Follow the Installation Guide, then run:

```
python -m uvicorn src.app:app --reload --port 8000
```

Open **http://127.0.0.1:8000** in your browser.

Uploading a Meeting

Drag and drop a file onto the upload area, or click it to browse. Supported formats are:

Category	Formats
Audio	.mp3 · .wav · .m4a · .ogg · .flac

Category	Formats
Video	.mp4 · .webm
Text transcript	.txt · .md · .vtt · .srt

Once the file is loaded, click **Summarise**. A progress bar appears. Audio files take 1–8 minutes depending on length and hardware. Text files are nearly instant.

Reading the Output

Summary

One short paragraph capturing the meeting's purpose and overall outcome. Designed to be readable in under 10 seconds.

Key Takeaways

A bullet list, each item tagged as one of two types:

- **Decision** (purple) — something agreed, approved, or set as policy.
- **Note** (grey) — any other important point, fact, or concern raised.

Action Items

A checklist of concrete tasks. Each item shows the task description, the responsible person (if named in the meeting), and the deadline (if stated). You can check items off as they are completed.

Saving to a Project

Before clicking Summarise, enable the project toggle to save the meeting to a project. Enter a meeting title and select an existing project or create a new one. Once processed, the summarization is saved automatically.

Saved meetings appear in the project timeline (left sidebar), ordered by date. Click a meeting to open the full summary. Deleting a project removes all meetings saved under it.

Known Limitations

- Owner attribution is reliable only when the speaker is named explicitly in the meeting.
- Non-English audio is not supported — the ASR model is English-only.
- Very long meetings (2+ hours) may take 5–8 minutes to process on modest hardware.
- The app requires an internet connection to reach the Claude API.
- iOS Safari does not support PWA push notifications.
